Botox®

Botulinum Toxin is a bacterial neurotoxin which blocks the flow of information from the brain to the muscle, thereby weakening the muscle and decreasing the movement in the skin. This results in the elimination of lines and wrinkles, thus producing a youthful appearance.

Treatment is quick and virtually painless. A tiny micro-needle is used to inject minute amounts of Botulinum Toxin into specific facial muscles, to stop movement. Onset is on average 2-4 days following treatment. Results averagely last 4-5 months.

Botulinum Toxin has been used medically for over 50 years and is often used alongside other anti-ageing treatments to enhance and maintain results for longer periods of time.
